SUMMARY

Information Technology graduate building web services that ship — deployed, tested across operating systems, and documented with the failures included.

The recurring theme is the bug that leaves no trace: an authorisation check that never runs, a query plan that is quietly quadratic, a test suite that passes while watching nothing.

PROJECTS

Job Board — access control as a test suite FastAPI · React · SQLite · Docker

github.com/les-k/job-board

- bullet 224 tests, 54 of which exist to prove the wrong person cannot do something: twelve endpoints against five kinds of caller, written as a table rather than ad hoc.
- bullet Verified the suite works by deleting the ownership check and re-running — exactly three tests failed, while every authentication test and the entire happy path still passed.
- bullet Found that a full-text search join made SQLite run a match once per listing: 145 ms for a rare term, 0.02 ms rewritten as a subquery. EXPLAIN QUERY PLAN was the only thing that showed it.
- bullet Keyset pagination rather than OFFSET, with a test reproducing the duplicated row OFFSET produces when a listing is posted between two page loads.
- bullet Upload handling decides file type by content rather than extension or Content-Type, stores generated filenames, and serves as attachments with nosniff.

snip — URL shortener, deployed FastAPI · SQLite · Docker · live

github.com/les-k/snip

- bullet Containerised and deployed to a public URL. 134 tests at 95% coverage, CI across Linux, Windows and macOS on five Python versions.
- bullet Refuses redirect targets that resolve to private and cloud-metadata addresses, verified against the live service rather than only in tests.
- bullet Four defects appeared only on deployment despite a green local suite — documented as the argument for deploying rather than trusting a passing suite.

Fraud Detection API FastAPI · scikit-learn · Docker

github.com/les-k/fraud-detection

- bullet A trained model served as a containerised scoring endpoint, committed at 1 MB so the API runs without the 150 MB dataset. 20 API tests covering the request contract and failure modes.

sweep — command-line tool Python · zero dependencies

github.com/les-k/sweep

- bullet Reclaims disk space, deleting a directory only when a marker file on disk proves it can be regenerated. 75 tests, CI across three operating systems.
- bullet A symlink counted as reclaimable space on Linux only — caught by running CI on all three platforms rather than one.

TECHNICAL SKILLS

LANGUAGES Python, JavaScript, SQL

BACKEND FastAPI, SQLite, REST API design, session authentication, scrypt, access control

FRONTEND React 19, Vite, semantic HTML, accessible components

TESTING pytest, node:test, coverage, mutation testing, CI matrices

OPERATIONS Docker, GitHub Actions, Render, ruff

SECURITY IDOR and access control, SSRF defence, upload validation, CSRF, password hashing

EDUCATION

BSc Information Technology — Zetech University, November 2023 Second-class honours, upper division

Coursework: Machine Learning, Data Science, Artificial Intelligence, Database Systems, Software Engineering, Distributed Systems, Programming Fundamentals (Python, Java, C, C++, JavaScript).

CERTIFICATION

ICDL Profile — Computer Pride.
