SUMMARY

Information Technology graduate building interfaces where accessibility and performance are measured rather than asserted — and where the build fails if either regresses.

Most front-end work claims to be accessible. The projects below can tell you what happens when someone changes a colour, because a script checks every contrast pairing and exits non-zero.

PROJECTS

Component Library React 19 · design tokens · WCAG AA

github.com/les-k/component-library

- Nine accessible components with a live styleguide, where the accessibility is enforced by CI rather than promised in the README.
- A contrast script parses the token file and computes 34 foreground and background pairings across light and dark themes, exiting non-zero on any failure. Each pairing names the surface the element actually renders on.
- 8 structural guards catch changes that look harmless in review: a hex colour written into a component, a removed focus ring, state carried in a CSS class instead of an ARIA attribute.
- A scroll region measures whether it actually overflows before becoming focusable, rather than adding fifteen tab stops that do nothing.

Product Landing Page HTML · CSS · Lighthouse 100

github.com/les-k/sweep-landing

- Lighthouse 100 across all four categories at 22.6 KB total, with a contrast check gating CI.
- Lighthouse caught a contrast failure the check had missed, because the check tested a tag against the wrong background surface. The reasoning behind the fix is recorded in the script rather than silently corrected.

Job Board — front end React 19 · Vite · 67 KB gzipped

github.com/les-k/job-board

- A single-page application built from the component library, served by the same process as its API so the session cookie stays same-origin and no CORS configuration is required.
- A router in roughly sixty lines rather than a dependency: real anchors so middle-click still works, focus moved to the new heading on navigation, and the browser's own scroll restoration left alone.

2048 JavaScript · zero dependencies · GitHub Pages

github.com/les-k/2048

- Square at every width with no horizontal overflow at 375 px, a focusable and labelled board, score changes announced through an aria-live region, and reduced motion honoured.

TECHNICAL SKILLS

LANGUAGES HTML, CSS, JavaScript, Python

FRONTEND React 19, Vite, design tokens, responsive layout, dark and light themes

ACCESSIBILITY WCAG 2.x AA, ARIA, keyboard navigation, screen-reader semantics, contrast measurement

PERFORMANCE Lighthouse, bundle budgets, critical CSS, asset discipline

TOOLING Git, GitHub Actions, GitHub Pages, npm, node:test

EDUCATION

BSc Information Technology — Zetech University, November 2023 Second-class honours, upper division

Coursework: Machine Learning, Data Science, Artificial Intelligence, Database Systems, Software Engineering, Distributed Systems, Programming Fundamentals (Python, Java, C, C++, JavaScript).

CERTIFICATION

ICDL Profile — Computer Pride.
